SUMMARY

Computer Science Engineering student at VIT-AP University with a strong foundation in programming, data structures, and core computer science subjects. Open to software development, analytical, and core engineering roles, with a keen interest in applying technical knowledge to real-world problems.

EDUCATION

2023 – Present	B.Tech in Computer Science Engineering, VIT-AP University	(CGPA: 8.63/10)
2022	Class XII	(94.1%)
2020	Class X	(100%)

SKILLS

Programming Languages	Java, Python Web
Technologies	HTML, CSS, JavaScript
Databases	MySQL (Basics)
Core Concepts	Data Structures and Algorithms, OOPS, DBMS, Operating Systems, Computer Networks

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- IBM Generative AI Certification

PROJECTS

Pot Hole Detection using Arduino

Developed a pothole detection system using Arduino and ultrasonic sensors to identify road surface irregularities and improve road safety through real-time detection.

Automated Trolley with Real-Time Billing System

Built a smart trolley using Arduino and RFID technology to automatically update item details and calculate the total bill in real time, displayed on an LCD.

ACHIEVEMENTS

- Member of Gamerscrib Club, VIT-AP.
- Participated in Radiothon Winter 2026 Hackathon, collaborating with a team to develop an Explainable AI Resume Screening System.
